PROFESSIONAL SUMMARY

Computer Science graduate specializing in Cloud Infrastructure and DevOps with hands-on experience deploying secure, production-grade cloud infrastructure using AWS, Docker, and Terraform. Proven ability to build and automate multi-environment CI/CD pipelines, deploy secure AWS infrastructure, and monitor containerized applications in production. Seeking a DevOps/Cloud Engineering role where I can drive automation, system reliability, and infrastructure scalability.

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, S3, IAM, Route 53, CloudWatch, CloudFront, ECS, ECR, RDS, DynamoDB)

DevOps & CI/CD: Docker, Terraform, Git, GitHub Actions, GitHub Secrets, NGINX, Certbot, Bash, Linux(Ubuntu)

Monitoring & Observability: Prometheus, Grafana, cAdvisor, Node Exporter, CloudWatch

Languages & Web: Python, JavaScript, React, Node.js, Express API, HTML, CSS, Java

Databases: MongoDB, SQL, RDS, DynamoDB

Tools: Git, GitHub, VS Code

CERTIFICATIONS

CompTIA Security+	March 2025
AWS Certified Cloud Practitioner	April 2025
AWS Certified Solutions Architect - Associate	July 2025
Terraform Associate	July 2025
AWS Certified Developer - Associate	[Scheduled: July 2025]

EDUCATION

Towson University, College of Science and Mathematics, Towson, MD

May 2025

Bachelor of Science, Computer Science

GPA: 3.70

Coursework: Data Structures & Algorithms, Software Engineering, Data Communications & Networking, Operating Systems, Web-Based Programming, Database Management Systems

CLOUD & DEVOPS PROJECTS

Multi-Environment CI/CD Pipeline - [aimablem.dev](https://github.com/aimablM/multi-env-cloud-cicd-pipeline)

<https://github.com/aimablM/multi-env-cloud-cicd-pipeline>

Docker, GitHub Actions, AWS ECR/EC2, NGINX, Route 53, Let's Encrypt, Multi-Branch Strategy

- Architected enterprise-grade multi-environment pipeline supporting 3 isolated environments (dev/staging/production) with branch-based deployments, enabling 5+ parallel development workflows
- Automated container orchestration with environment-specific Docker tags, systematic port allocation, and zero-downtime deployments using blue-green deployment principles
- Implemented infrastructure with NGINX reverse proxy managing 4+ subdomains, wildcard DNS routing, and automated SSL certificate management reducing certificate maintenance by 100%
- Designed complex CI/CD workflows with 3 separate GitHub Actions pipelines, reducing deployment risk by 90% and manual deployment time from 45 minutes to 3 minutes (95% reduction)

Secure Cloud Portfolio Website - [aimablem.dev](https://github.com/aimablM/aimable-myportfolio)

github.com/aimablM/aimable-myportfolio

React, Docker, GitHub Actions, AWS EC2, Terraform, Route 53, NGINX

- Designed and deployed containerized React application using Infrastructure as Code (Terraform) with production-grade multi-AZ architecture across 2 Availability Zones for fault tolerance.
- Configured a secure VPC with public subnets, internet gateway, route tables, and tightly scoped security groups.
- Implemented automated GitHub Actions CI/CD pipeline reducing deployment time from 30 minutes to 2 minutes (93% reduction) with image builds, ECR pushes, and remote EC2 deployments.
- Secured domain routing using Route 53 with HTTPS via Certbot achieving 100% SSL coverage and automatic certificate renewals every 60 days.

Infrastructure Monitoring Stack - [monitor.aimablem.dev](https://github.com/aimablM/grafana-prometheus-monitoring-stack)

github.com/aimablM/grafana-prometheus-monitoring-stack

Prometheus, Grafana, Docker Compose, Node Exporter, cAdvisor, NGINX, EC2

- Deployed comprehensive observability infrastructure monitoring my EC2 instances and 10+ containerized applications with real-time metrics collection at 15-second intervals
- Implemented 4 production-grade Grafana dashboards from official marketplace tracking 50+ system and container metrics with proactive alerting for CPU (>80%) and memory (>85%) thresholds, reducing incident response time by 75%
- Automated infrastructure recovery with CloudWatch integration contributing to near- 99.9% uptime through EC2 health checks and auto-restart capabilities
- Secured monitoring endpoints with TLS termination and reverse proxy routing via NGINX, protecting 4 monitoring services behind authentication

FlashLearn - Custom FullStack Flashcard App - [flashlearn.aimablem.dev](https://github.com/aimablM/flashlearn-cloud-infrastructure)

github.com/aimablM/flashlearn-cloud-infrastructure

Vanilla JS, Node.js, Express API, MongoDB Atlas, Docker Compose, GitHub Actions, NGINX, EC2, Route53

- Built and deployed a self-coded learning platform with secure user auth and flashcard creation
- Designed end-to-end CI/CD pipeline for multi-service Docker deployment reducing build time from 12 minutes to 4 minutes (67% improvement) using GitHub Actions and Docker Hub
- Managed 15+ secure environment variables with GitHub Secrets and enforced domain isolation across 3 separate service endpoints
- Implemented scalable microservices architecture with 3 separate containers (frontend, backend, database) and systematic health monitoring checking service

ADDITIONAL EXPERIENCE

Cloud & DevOps Engineer | *Freelance*, Remote

January 2025 – Present

- Built and configured secure, production-grade infrastructure on AWS using Terraform, Docker, ECS and EC2 across multiple Availability Zones
- Automated multi-environment CI/CD pipelines with GitHub Actions, Docker Hub/ECR, and remote EC2 deployments
- Deployed and monitored fullstack containerized applications with Docker Compose, NGINX reverse proxy, and TLS termination
- Authored public GitHub documentation and project breakdowns detailing architecture, decisions, and CI/CD workflows

Returns Learning Ambassador | *Amazon*, Aberdeen, MD

December 2020 – June 2024

- Led technical onboarding programs for new hires, delivering hands-on training for company software tools and procedures
- Optimized return processing workflows, increasing operational efficiency by 15% through process improvements and training initiatives
- Managed cross-functional team logistics, coordinating resources, schedules, and priorities to ensure efficient operations and timely delivery
